

John Benedict Falculan

Web Developer

Manila, Philippines | j.benedict.f06@gmail.com | 0939-117-6323 | Portfolio: JBenedictF-06.github.io

SUMMARY

Web developer with 3 years of experience designing and building full-stack internal business systems and company websites end-to-end — from requirements gathering through deployment and maintenance. Core stack: HTML, CSS, JavaScript, PHP, and MySQL, extended through a low-code platform (Rukovoditel) for rapid system delivery. Comfortable working independently as sole developer on live, business-critical systems, and increasingly uses AI-assisted development tools (Claude, Copilot) to speed up coding and debugging.

SKILLS

HTML • CSS • JavaScript • PHP • MySQL (Database Design) • Admin Panel / Backend Development • Workflow Automation • Low-Code Platform Development (Rukovoditel) • AI-Assisted Development (Claude, GitHub Copilot)

Basic knowledge: Python, C#, Java

EXPERIENCE

Web / Systems Developer — Corporate Group — Retail, Security, Staffing *Sep 2023 – Present*

- Designed and built multiple internal business systems end-to-end — from stakeholder requirements to deployment — including an HRIS, CRM, Inventory Management System, Visitor Management System, Operations Activity Monitoring System, and Recruitment System, all currently live and in active company-wide use.
- Developed and maintain custom backend logic, database schemas (MySQL), and admin panels (PHP, JavaScript) for each system, extending a low-code platform (Rukovoditel) with custom scripts and integrations beyond its out-of-the-box functionality.
- Built and maintain multiple live company and client-facing websites — including aromacity.ph, kenkim-ent.com, 51st-securitygroup.com, and bluecollarmanpowerservices.com — covering both front-end development and admin-side backend management.
- Independently own the full software development lifecycle as sole developer for all internal and client systems, managing competing priorities across multiple related companies.
- Adopted AI-assisted development workflows to accelerate coding, debugging, and prototyping across concurrent projects.

Key systems built:

- HRIS — employee records, attendance, and payroll-adjacent workflows
- CRM — client and lead tracking across sister companies
- Inventory Management System — stock levels, requests, and reporting
- Visitor Management System — check-in/check-out and access logging
- Recruitment System — applicant tracking from application to hire
- Operations Activity Monitoring System — task and activity tracking across teams

EDUCATION

Bachelor of Science in Information Technology

Polytechnic University of the Philippines
